

# tesa® BevSeal – Combination of four technologies

1. tesa PrioSpot® contains a code unique to the individual item for authenticity verification, which is repeated both visibly and concealed on multiple verification levels.

2. The tesa® SecuritySeal protects against refilling; it cannot be removed either at high or low temperatures.

3. Suppliers can integrate the functions of the tesa® dtect App into their own apps, with the added benefit of strengthening brand loyalty.

4. Thanks to the individual coding tesa BevSeal can effortlessly be used for Track & Trace. Logistics and brand protection get detailed, reliable data.
